

# Introducing jumpQ by blockit

## REDUCE LOST REVENUE FROM CANCELED APPOINTMENTS

Reduce lost revenue with an automated text-based solution that works on your behalf, without staff involvement, to proactively offer earlier appointments to already scheduled patients. The jumpQ patient-focused workflow is designed with efficiency in mind, leading to reduced wait times and increased patient volume.

# \$150 Billion

*The total cost  
of missed  
healthcare  
appointments  
in the United  
States every  
year*

## TRUE COST OF UNUSED SCHEDULE CAPACITY

It's estimated that each open appointment can cost a practice \$200 on average.

Imagine being able to offer one of your already scheduled patients an earlier open appointment time as soon as it became available.

Not only would you be able to **reduce your unused schedule capacity and accelerate access to care**, you would also vastly **improve their patient experience**.

We are excited to introduce jumpQ as part our offering at blockit to help your practice achieve this goal.

When an open appointment becomes available in your schedule, a text message will automatically be sent to future scheduled patients based on criteria you've determined to offer an earlier appointment time.

The patient can determine to accept or decline the new appointment time all through their mobile device and **without manual intervention from front office staff**.

Find out how your practice can see up to an **18-day improvement** in access to care with jumpQ.
